mforms
from Cambric Systems

The Best-in-Class Clinical e-Forms Solution Specially Designed for Healthcare
Fast-track your way to going digital

Built upon the proven capabilities of Cambric's flagship platform Morse - the Mobile EPR App for Community Health and Social Care - mForms is designed to accelerate and simplify the adoption of digital forms in today's complex and rapidly changing healthcare ecosystem.

The mForms Promise

- **Accurate, consistent capture** of clinical information on the move or in any healthcare setting

- **Power** to produce intelligent, fully-featured digital forms in an instant

- **Flexibility** to create new forms that are tailored to your unique health environment

- **Forms that matter** because they are based on real-world best-practice experience working in close collaboration with NHS Trusts and Scottish Health Boards

- **Always by your side** – from designing bespoke forms to after sales training and support and everything in between.
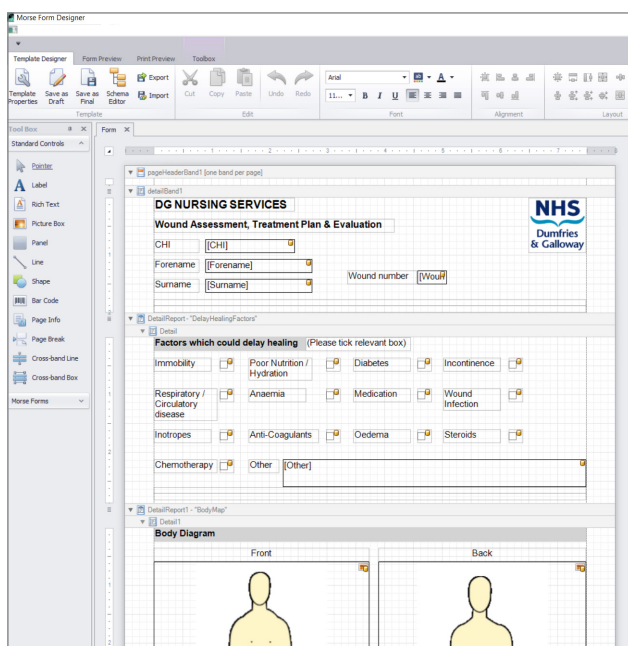

One complete digital forms solution

Capturing accurate, consistent clinical information lies at the heart of the Cambric Systems ethos and of mForms. We have a simple rule – 'if you can think it, chances are mForms can do it!' Anything from everyday nursing documentation to ward rounds can be designed locally or using our special design service.

The following three products and services make up the mForms family. Combine them to transform your digital forms processes:

Clinical Forms - our bespoke Morse Form Designer tool is an easy-to-use application. It's extremely powerful engine offers the means to build forms and assessments that meet the exact requirements
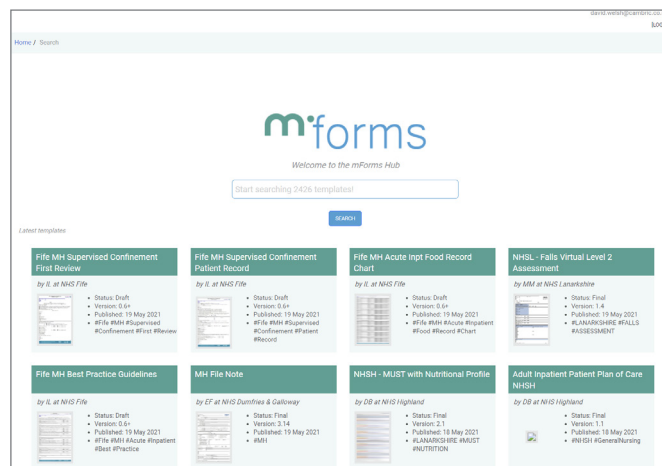

of your health care service. Utilise our user-friendly visual design tool to:

- Quickly pull together, transfer and re-use information such as weight and height or allergies between mForms, Morse and other upstream systems.

- Swiftly monitor critical activities by carrying out automatic calculations such as Malnutrition Universal Screening Tool (MUST) scores.

- Add text fields, images, drop-downs, radio buttons.

- Pre-populate forms with essential patient information such as demographics.

- Capture images directly into your form from the device camera.

- Add annotations to drawings or capture signatures via an iPad touchscreen (or use a mouse if using a desktop/laptop).

- Share forms between Acute and Community healthcare teams.

- Publish completed mForms to leading health records and patient care solutions such as TrakCare and Orion Portal.

- Subscribers of Cambric's Morse mobile EPR app can create, update and then synchronise forms and tasks from within mForms.

mForms Hub is our form template repository, containing several thousand clinical templates designed by Cambric in collaboration with NHS organisations and by NHS Trusts and Health Boards themselves. The templates are available to reference or re-use within the mForms platform, providing a fast start resource for trusts and health boards adopting digital forms.

Take advantage of the Cambric mForms Hub to:

- Browse from over 2,800+ clinical templates.

- Find the template you need quickly using advanced search options.

- Create a digital forms framework – comprehensive repository of ready-made templates serves as a good starting point when considering form requirements for NHS services and users to see what other boards and trusts have done with their forms.

- Save time – no need to create a new form from scratch. Templates can be copied and modified to suit requirements.

Training and support - we also offer a form design service in addition to providing after-sales form design training and support.

Key Benefits

mForms creates a robust framework for digital forms management. Our e-Forms solution accelerates and simplifies the end-to-end digital forms processes providing the following benefits:

Simplicity - the user-friendliness of mForms encourages widespread adoption of new technology while dramatically transforming the organisation's e-forms processes from day one. The Windows-based application offers drag-&-drop simplicity for creating clinical forms. Meanwhile, behind the scenes, an advanced scripting engine supports almost any type of forms requirement.

Time savings with extra benefits - the ability to capture and re-use information from other existing forms presents huge time savings to busy clinicians. What is more, while replicating existing service paperwork, mForms provides additional enhancements such as automatic calculations of MUST scores, avoiding the potential for errors when scores are calculated manually.

Single view of e-Forms environment - validation of entries improves data quality and consistency while all mForms information is stored within an MS SQL database and accessible via a variety of business intelligence tools including Tableau, Power BI, QlikView and Business Objects. This gives healthcare organisations a single view of the clinical data recorded within their electronic forms
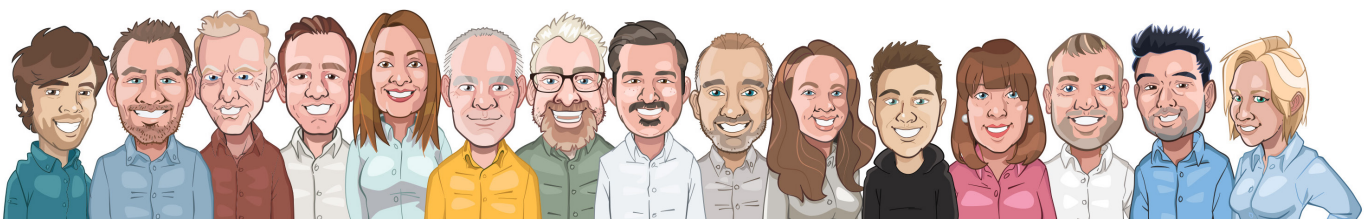

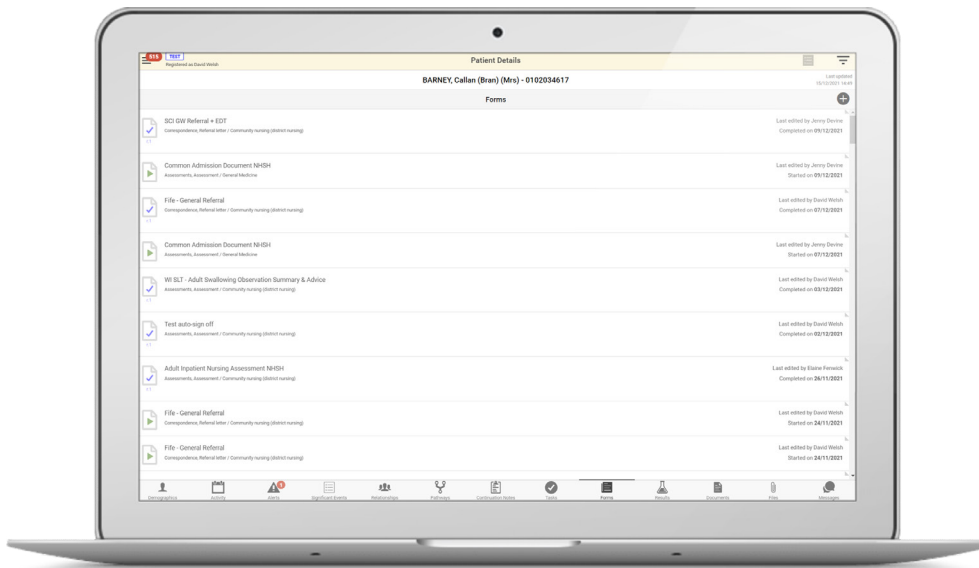

and reassurance that their digital forms processes are working effectively and in harmony.

Improved decision-making - forms created by mForms are stored directly against every single patient record to provide a detailed outline of care provision, supporting clinical decision-making.

Joined-up healthcare – through the mForms Hub all health boards and trusts can contribute and share knowledge, facilitating best-practice learning. mForms provides multiple publishing routes for completed forms. Once completed and signed off, locked forms can be published to the SCI Store repository and any other local patient record repository. Forms can also be published via email and electronic document transfer (EDT), the prime route for delivering to many GP systems. By enabling the sharing of patient information held in forms, mForms actively contributes to the development of integrated care systems.

Cambric's mForms solution is included with the Morse Platform Enterprise subscription and is also available as a standalone e-Forms solution only. Please contact us for further details including pricing and a free demonstration.

About Cambric Systems

Cambric provides powerful, flexible, and intuitive healthcare software solutions that deliver critical patient information to the clinician and health care professional at the point of care whether on the ward, in the clinic, or in the community.

We have been working with NHS health boards and trusts for over 20 years to ensure they obtain maximum benefit from their Cambric solutions through our collaborative approach and a blend of trusted support and consultancy services.
